

Colorado Department of Transportation – US 6 Bridges Design Build Project

Colorado Department of Transportation's \$98 million project along US 6 replaced six obsolete bridges between Knox Court and I-25, and eliminated weaving movements between Federal Boulevard and I-25 to improve travel times and safety. Crews increased mobility and access to neighborhoods by adding a dedicated bike lane on the new Knox Court Bridge and by improving connections between trails and the new pedestrian bridge over 6th Avenue. This vital investment and comprehensive community outreach initiatives allowed officials to deliver 10 years' worth of improvements in just 21 months, saving taxpayers time and money in user, construction and maintenance costs.
