

# Tennessee Department of Transportation – Fast Fix 8

Tennessee Department of Transportation's \$62 million project replaced eight bridges on I-40 in downtown Nashville seven months ahead of schedule. The project was the first project for the DOT using the Construction Manager/General Contractor procurement method, in which the contractor was involved early in the design process, allowing crews to complete it in four months and 10 weekends. Community support grew quickly through creative branding and extensive outreach to inform travelers about detours, impacts and benefits from the project. The new bridges ensure that transportation infrastructure remains safe and reliable to sustain continuous flow of travel, freight and commerce for decades to come.
